

PALAK JEWELLERY – SYSTEM USER GUIDE & NAVIGATION FLOW

Welcome to the **Palak Jewellery Sales & Settlement Management System**. This guide provides a simple walkthrough of how the system operates, how to navigate the **Mobile App** and the **Web Admin Panel**, and how they coordinate to complete a secure transaction.

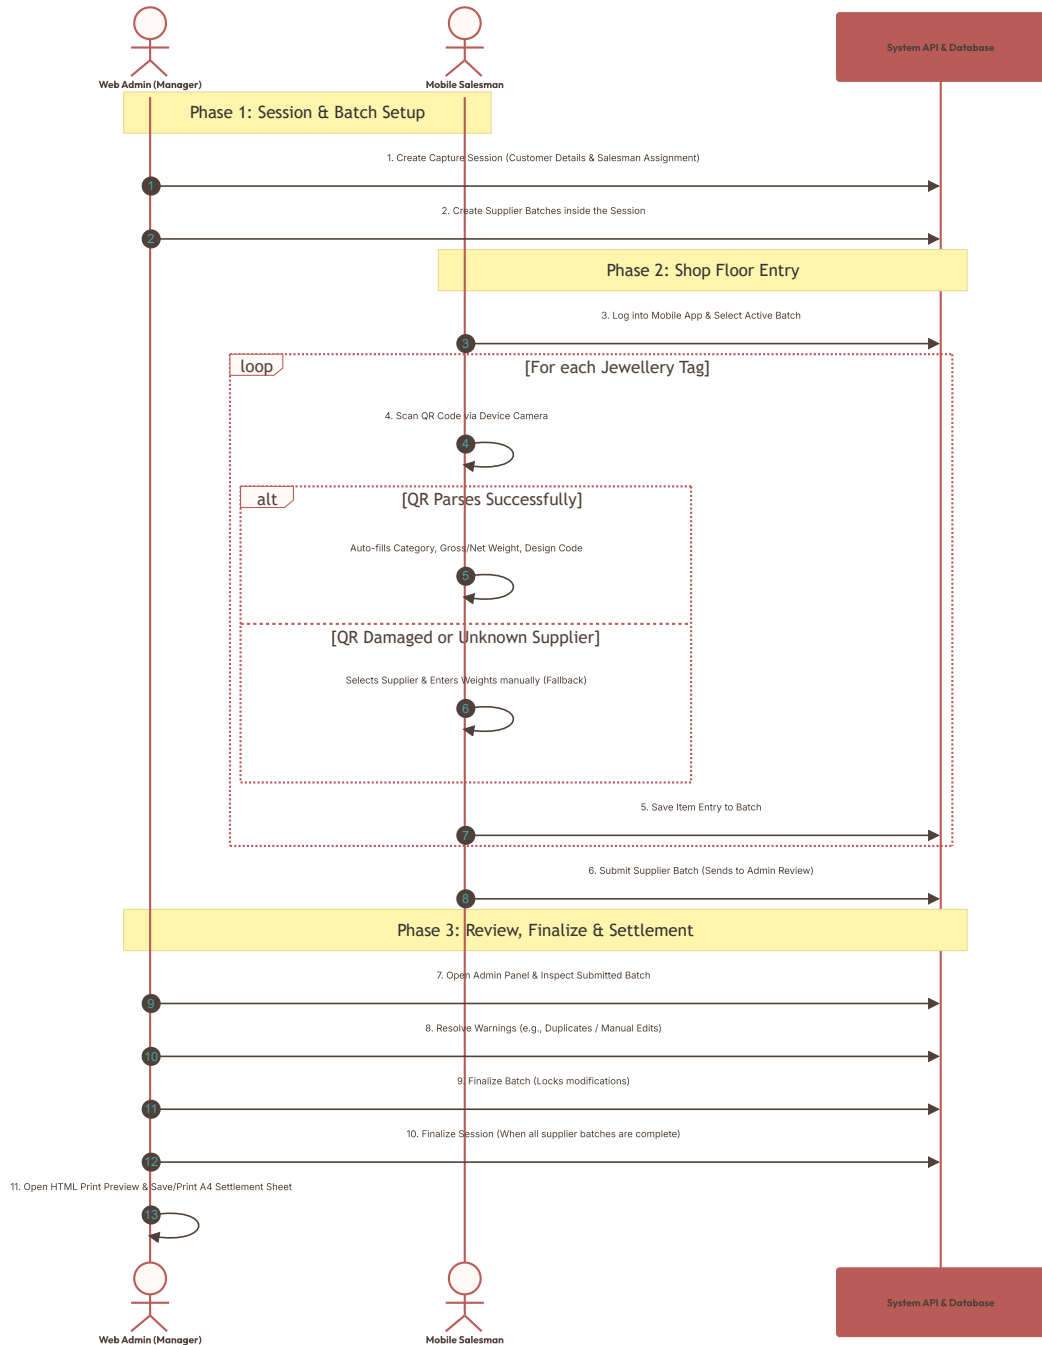

1. SYSTEM ROLES

The system is designed for two main roles:

1. **Salesman (Mobile App User)**: Works on the shop floor scanning jewellery tags and submitting sales batches.
 2. **Administrator / Manager (Web Admin Panel User)**: Configures system parameters, starts/assigns sessions, reviews transactions, and prints settlement sheets.
-

2. CORE USER FLOW DIAGRAM

The diagram below shows the complete lifecycle of a sales and settlement workflow:

3. MOBILE APP NAVIGATION (SALESMAN FLOW)

The mobile app is optimized for speed on the shop floor. A salesman should be able to scan and record a sale in under 60 seconds.

Step 3.1: Log In

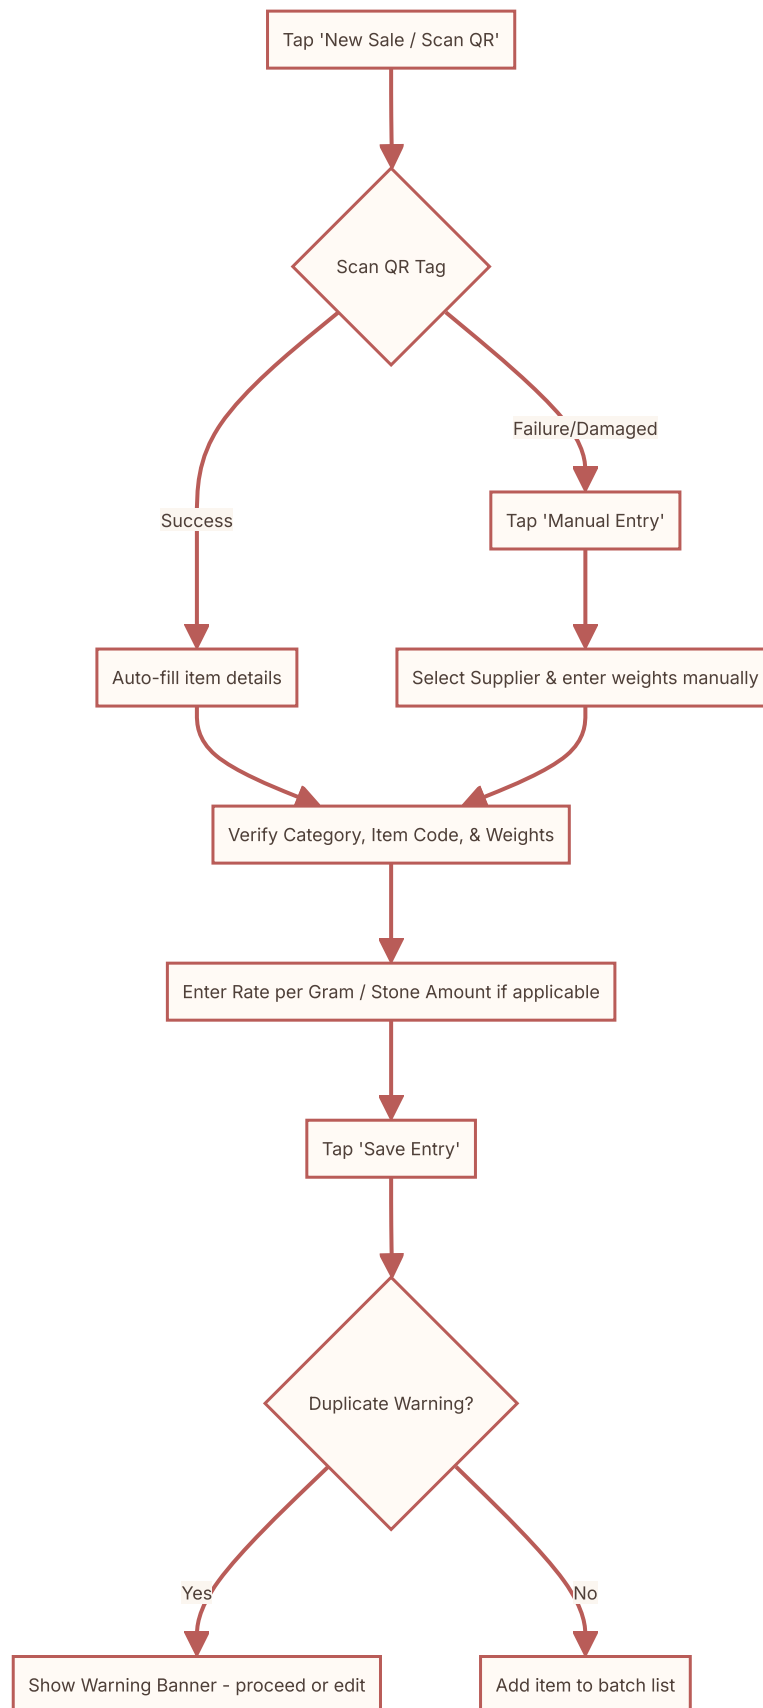

- Open the mobile app.
- Enter your assigned email address and password.
- Click **Login**.

Step 3.2: Select Active Batch

- Upon logging in, you will see your **Dashboard** showing today's totals (sales count and weight sold).
- Click **View Assigned Sessions/Batches**.

- Select the active batch for the supplier you are currently scanning for.

Step 3.3: QR Scanner & Data Verification

- **Happy Path:** Scan the QR code on the jewellery tag. The app automatically detects the supplier, item/design code, karat, and weight fields. Enter any missing details (like rate/stone charges) and tap **Save**.
- **Fallback Path (Damaged QR):** If the scanner cannot read the tag, tap **Manual Entry**, select the supplier from the list, manually type the weights, and tap **Save**.
- **Duplicate Warnings:** If the same item tag is scanned twice on the same day, a warning banner is displayed. You can choose to override it or cancel.

Step 3.4: Submit Batch

- Once all pieces from the supplier are scanned and verified, tap the **Review Batch** button on the screen.
- Confirm the total items count and gross weight match your physical items.
- Tap **Submit Batch**. The batch is locked on mobile and sent to the Admin Panel for review.

4. WEB ADMIN PANEL NAVIGATION (MANAGER FLOW)

The web dashboard is accessed via desktop/laptop browsers. It gives owners and managers full control over suppliers, configurations, session audits, and printing.

Step 4.1: Supplier & QR Configuration

To ensure the mobile app can parse your supplier tags, navigate to **Suppliers**:

- **Add Supplier:** Register the supplier with their Name, Code, Address, and payment info.
- **Configure QR Strategy:** Map how the QR strings are read (Delimiter-based, Fixed Position, or JSON).
- **QR Test Tool:** Paste a raw QR string from the supplier into the test input area to instantly verify if weights, categories, and item codes are parsing correctly.

Step 4.2: Session Management

Navigate to **Capture Sessions**:

- Click **Create Session**.
- Enter Customer Name, Phone, and Reference Note.
- Assign a Salesman.
- Add Supplier Batches to the session (each batch corresponds to one supplier).

Step 4.3: Reviewing & Finalizing Batches

Navigate to **Settlement Workflow**:

- Look for batches marked **Submitted**.
- Click **Review**.
- Check the **Warnings & Exceptions Panel**: It alerts you to duplicate scans, manual overrides, or weight mismatches.
- If everything is correct, click **Finalize Batch**.
- When all supplier batches in a session are complete, click **Finalize Session**.

Step 4.4: Print & PDF Settlement Exports

Once finalized, you can print reports directly from the browser print engine:

- Select the report type:
 - **Session Combined Report:** The master invoice showing grouped summaries for all suppliers in the session.
 - **Supplier Section Report:** Individual supplier-specific transaction breakdown.
 - **Item Ledger:** Overall list of item audits.
- Click **Print Preview**.
- A portrait A4 document container will open in a new tab featuring the Palak Jewellery branding.
- Click **Print / Save PDF** in the floating toolbar. Select **Save as PDF** or print directly to your physical printer.

5. SUMMARY CHECKLIST FOR SUCCESS

ACTION	DONE BY	TOOL	KEY REQUIREMENT
Set up Supplier QR rules	Admin	Web Panel	Test via the QR Test Tool
Start Session & Assign	Admin	Web Panel	Enter correct Customer Phone/Notes
Scan Jewellery Tags	Salesman	Mobile App	Ensure correct active batch selection
Submit Batch	Salesman	Mobile App	Verify physical piece counts first
Audit & Finalize	Admin	Web Panel	Resolve warnings in Exceptions Panel
Print Settlement PDF	Admin	Web Panel	Use Portrait A4 browser print engine
